Talk with Mr Alief

On May 28, 2024, Tuesday, I had the opportunity to attend a talks program with Mr. Muhammad Alieff Aman Kamaruzaman, an alumni of BITD (UTeM) and a Cloud Database Engineer at Petronas Digital Sdn Bhd. During the talk, he provided insights into the specific market of database management, which we are studying. He emphasized the importance of exploring more applications related to DBA and frameworks that are widely used in the industry. One key point he stressed was the need for proficiency and exploration using .NET frameworks, as he believes the current market is focused more on its usage.

Furthermore, he highlighted the extensive use of cloud databases nowadays, with many industries adopting AWS and Google Cloud SQL. Throughout the program, he encouraged us to ask questions. One question I asked was about tips and techniques to succeed in interviews. He responded by advising us to be confident in ourselves and to understand not only how to converse about topics but also how to implement what we talk about.

Lastly, during the program, we were tasked with summarizing what we learned from the first to the third year to estimate which position aligns best with the languages we have studied. At the end of the program, we had the chance to visit booths around us to explore opportunities for internships or careers for students still seeking placements or those looking to explore job prospects. That concludes my report. Thank you.

Evidence for Attendance
